Quick Books On-Line Inventory Platform For Small
Businesses

We are frequently asked if the QuickBooks OnLine (QBOL) cloud based platforms have an inventory management capability. The answer is yes (“OnLine Plus” versions). We have found the feature sufficient for most small companies who will require a limited number of users on the platform although the number of users can be increased for a slightly higher monthly cost. Because the inventory feature is new to QBOL, a user may not find all the inventory analytics in place one would typically require nor is it likely to support complex manufactured products. Our experience has been that QBOL will remedy this situation over time with upgrades as they have done with all their products. Of course these upgrades will be at no cost given the cloud based model.

If you go to our web site

www.hurleygroupusa.com/Services.html you will find a link showing a comparison of the different QBOL products. They also offer free 30 day product trials.

We’ve always encouraged small early stage companies to work with QBOL initially rather than take on the challenge of installing a more complicated platform taking away from other growth priorities for management. We’ve also found transferring data from QBOL to other higher level packages at a later date can be accomplished easily.

If we can provide you any additional information on QBOL please contact us directly at
